

## DESIGN OF SOLUTIONS

Design of Solution is a service, focussing on how you may implement a technical and non-technical combination for a specific project or an activity. This design is customized to the specific objective requirement integration of technology and business process management, which gives effective solution in meeting a business objective.

- Business Objectives
- SWOT analysis
- Process and technical requirements
- Drafting of Process design which is expected to meet the business objective
- Solution design in terms of a process flow
- Resources requirements (with adequate capability & capacity)
- Best practices guidelines describing project phases and tasks
- Effort estimate for the project based IRCBO experiences
- Transitioning & Validation of the solution in terms of hardware and software needed

Designing solutions to fit your needs.
